

Wuxi SDO stainless steel Co., Ltd

201 J1 Stainless Steel Sheet

201 stainless steel has certain acid and alkali resistance, high density, no bubbles, no pinholes, etc. It is used to produce high-quality materials for various watch cases and watchband back covers. Mainly used to make decorative tubes, industrial tubes, and some shallow stretched products. 201 J1 has a slightly higher carbon content than J4 and a slightly lower copper content than J4. Its processing performance is not as good as J4. It is suitable for ordinary shallow drawing and deep drawing products with large angles, such as decorative panels, sanitary products, sinks, product pipes, etc. Wuxi SDO [stainless steel factory](#) can provide various stainless steel products to meet your needs.

Processing Service Of Our 201j1 Stainless Steel Sheet

- **Cutting+Slitting-316stainless steel narrow strip, special**

length/width plate

(1) Flame cutting: The cost of flame cutting equipment is low and it is the only economical and effective means to cut thick metal plates, but it has its shortcomings in thin plate cutting.

(2) Laser cutting: Laser cutting equipment can cut stainless steel plates below 30mm. Adding oxygen to the laser beam can cut 40mm thick carbon steel, but after oxygen cutting, a thin oxide film will be formed on the cutting surface.

Wire cutting: It is developed on the basis of EDM perforation and forming. It has not only developed the application of EDM, but also replaced EDM perforation and forming in some aspects.

(3) Shearing cutting: Uses a moving upper blade and a fixed lower blade and uses a reasonable blade gap to apply shearing force to metal plates of various thicknesses so that the plates can be broken and separated according to the required size. Shearing machine is a kind of forging machinery, and its main function is the metal

processing industry.

(4) Plasma cutting: It is a processing method that uses the heat of a high-temperature plasma arc to partially or partially melt (and evaporate) the metal at the incision of the work piece and uses the momentum of the high-speed plasma to remove the molten metal to form an incision.

(5) Slitting: Also known as slitting, refers to the process of uncoiling, slitting, leveling, and winding stainless steel coils into coils of the required width.

- **Surface processing - 8K mirror, HL hairline, color coating**
- **Bending+Welding - OEM customized products as drawing**
