201 J3 Stainless Steel Sheet

High carbon, low chromium and low copper, but because of its high carbon content and low copper content, the material is slightly harder, so it is not suitable for bending with a slightly stronger strength. Compared with 201-J1 material, the ductility is not so good, and it is easier to rust in the same environment. In the narrowband field, the emergence of J3 materials is more developed to meet the needs of pipe-making companies for corrosion resistance and low deformation requirements. Because of its ability to reduce the cost of raw materials for pipe-making companies, it is sought after by pipe-making companies in the narrowband field. Wuxi SDO [stainless steel factory](#) can provide various stainless steel products to meet your needs.

Processing Service of Our 201j3 Stainless Steel Sheet

- Cutting+Slitting - 201J3 stainless steel narrow strip, special

length/width plate

(1) Flame cutting: The cost of flame cutting equipment is low and it is the only economical and effective means to cut thick metal plates, but it has its shortcomings in thin plate cutting.

(2) Laser cutting: Laser cutting equipment can cut stainless steel plates below 30mm. Adding oxygen to the laser beam can cut 40mm thick carbon steel, but after oxygen cutting, a thin oxide film will be formed on the cutting surface.

Wire cutting: It is developed on the basis of EDM perforation and forming. It has not only

(3) developed the application of EDM, but also replaced EDM perforation and forming in some aspects.

(4) Shearing cutting: Uses a moving upper blade and a fixed lower blade, and uses a reasonable blade gap to apply shearing force to metal plates of various thicknesses so that the plates can be broken and separated according to the required size. Shearing machine is a kind of forging machinery, and its main function is the metal processing industry.

(5) Plasma cutting : It is a processing method that uses the heat of a high-temperature plasma arc to partially or partially melt (and evaporate) the metal at the incision of the workpiece and uses the momentum of the high-speed plasma to remove the molten metal to form an incision.

(6) Slitting: Also known as slitting, refers to the process of uncoiling, slitting, leveling, and winding of stainless steel coils into coils of the required width.
