

Wuxi SDO stainless steel Co., Ltd

8k/16k Mirror Stainless Steel Sheet

The stainless steel mirror plate is also called the mirror plate. The surface of the stainless steel plate is polished by polishing equipment with abrasive liquid to make the surface brightness as clear as a mirror. The stainless steel plate has a smooth surface, high plasticity, toughness and mechanical strength, and is resistant to corrosion by acids, alkaline gases, solutions and other media. Wuxi SDO [stainless steel factory](#) can provide various stainless steel products to meet your needs.

Uses Of Stainless Steel Mirror Plate

Stainless steel mirrors plate are mainly used in building decoration, elevator decoration, industrial decoration, facility decoration and other stainless steel products. With the continuous update of technology in the stainless steel industry, the application range of stainless steel mirror panels is also expanding. In the future, we will see the application of [mirror finish stainless steel sheet](#) panels on more occasions.

Features Of Stainless Steel Mirror Plate

The 8K/16K stainless steel mirror panel has corrosion resistance. The color surface layer after plating will not fade for a long time. At the same time, the color surface layer can withstand the temperature of 200°C, and the salt spray corrosion resistance is better than ordinary stainless steel. At the same time, 8K and 16K The wear-resistance and scratch-resistance performance of the Foil is equivalent to the tightness of the foil layer, and the colored layer will not be damaged when bent, which greatly improves the utilization rate of the stainless steel plate.
